help of the coach on the field. They must learn that the success of the meet depends upon their co-operation in getting the events started promptly and should always remember that the crowd appreciates good, honest endeavor and disapproves of unsportsmanlike methods.

### MEASURING THE TRACK.

Measure the track 12 inches from the inner edge or curb. If the track was built on the eighteen-inch measurement, place marks back from the finish line, as the distance for the different races requires.

Under the old rules, tracks were measured on a line eighteen inches out from the curb. Experiment shows that the athlete runs about only twelve inches from the curb and, in the interest of uniformity, the National Collegiate Athletic Association changed its rules to conform with the International Amateur Athletic Federation rules.

Where tracks are laid out with an 18-inch measurement the difference between the 18-inch and the 12-inch line amounts to 3 feet 1 1/4 inches per lap on a track, no matter how many laps there are to the mile. The following figures will make the re-marking very simple. To find the difference per mile between the two methods of measuring, multiply the number of laps by 3 feet 1 1/4 inches. Thus a

4-lap track equals.....	12 feet 7 inches.
5-lap track equals.....	15 feet 8 3/4 inches.
6-lap track equals.....	18 feet 10 1/2 inches.
7-lap track equals.....	22 feet 1/4 inch.
8-lap track equals.....	25 feet 2 inches.
9-lap track equals.....	28 feet 3 3/4 inches.
10-lap track equals.....	31 feet 5 1/2 inches.
11-lap track equals.....	34 feet 7 1/4 inches.
12-lap track equals.....	37 feet 9 inches.
13-lap track equals.....	40 feet 10 3/4 inches.
14-lap track equals.....	44 feet 1 1/2 inch.
15-lap track equals.....	47 feet 2 1/4 inches.

By placing marks on the track 3 feet 1 1/4 inches apart for every lap run, that distance will be added. It will be much better to correct one curve of the track by increasing the tangent or straight portion of the track a distance of 1 foot 6 3/4 inches, thereby shifting the center point of one of the curves to that extent.

## 1937 COLLEGIATE HONOR ROLL

The Collegiate Honor Roll is based on performances by eligible college men in the season of 1937. The ranking is determined by vote of the Rules Committee and representative coaches from all sections.

## Best Records Made by American College Men

The National Collegiate Athletic Association has a Records Committee whose duty it is to pass upon all claims for new records. In case of a claim for a record, the parties concerned should communicate with Mr. A. A. Stagg, College of the Pacific, Stockton, Calif., the Chairman of the Committee. The attached list of best records made by American college men, while they were undergraduates or since they have left college, has been passed upon and accepted by the National Collegiate Athletic Association Records Committee. With few exceptions the holders of world records were college athletes. Events indicated with star (\*) are best college records only; all others are world records.

## THE INTERSCHOLASTIC TRACK AND FIELD PROGRAM

By E. A. Thomas.

The increasing interest in high school track and field athletics throughout the United States is causing coaches and officials to consider seriously the matter of analyzing the program and schedule of events to ascertain whether or not the events as we now have them are the most satisfactory for boys of high school age and physical development. To be sure, the boy of eighteen or nineteen years who has almost reached his physical maturity can participate in events and handle implements designed for college athletes and older men; but the program cannot be sold to American youth on that basis. If we are to interest our youngsters in a program of running, hurdling, and handling weight implements we must first of all provide them with facilities which will attract their interest and permit them to excel.

A few years ago the height of the high hurdles was reduced to 39 inches for high school boys and the almost universal acclaim with which the change has been received indicates the possibilities in revising our whole program. A few college coaches shook their heads, but many of the doubters have become convinced since the crop of hurdlers has increased so materially and the quality of performance has improved. Boys who were champions at the 39-inch height are still champions at the higher height in college. How absurd to think that a boy who has hurdled at the high school height cannot take the higher hurdle after he has had the advantage of the physical development his increased age brings him. And what a reflection on our coaches if they admit they cannot teach a man to take a hurdle three inches higher than he took when he was a school boy.

The low hurdle change has brought new hurdlers into competition, but the reduction of the distance from 20 yards to 18 has not proved itself entirely satisfactory, as yet. We are handicapped by tradition and seem to think we have to have a race over ten hurdles. Experiments are now being conducted under the direction of leading coaches and under the auspices of one of our leading universities, and we might learn that our boys can still run hurdles 20 yards apart, provided there are not quite so many of them.

Experiments have been completed on a high school discus and we know that the present official implement is entirely too heavy for general high school use. We also know that hundreds of high schools have dropped the discus throw as a regular event; that the primary reason is given as danger; but that most of the danger can be removed if the weight and size of the implement is reduced so that high school boys can handle it with facility. There is little doubt that within a year an official high school discus will be adopted.

How about the length of the races? Since there are so many races of various lengths it is not probable that many alterations in that part of our program will be necessary. Almost any boy who can run at all can find a suitable distance at which to try his ability in our present program. Relay races are doing much to keep up the interest in running. Medley relays assist in providing something for a group of average boys and the new high school medley of 220-110-440-880 yards is being adopted in a number of states. It is tremendously popular in those states in which it has been officially adopted.

College and university coaches are just beginning to realize their responsibility in the building of a track and field program peculiarly fitted to the needs of high school youngsters. Their cordial cooperation, replacing their former skepticism, is helping materially with the solution of the problem before us.

# 1937 NATIONAL INTERSCHOLASTIC HONOR ROLL

Compiled by E. A. Thomas.

The writer has endeavored to collect the results of all state high school meets and other important meets throughout the country and from these results has compiled an honor roll. The best recorded performances in each event during the 1937 season are listed. Performances worthy of record during the 1938 season should be reported to E. A. Thomas, Box 14, Topeka, Kansas.

It is difficult to compare the performances of boys in different sections of the country because of the variation in weather conditions. Some of the best performances recorded.

were made either under ideal conditions or when there was a slight wind blowing to aid the runners. In some events the records from certain sections do not show up so well because of adverse weather conditions on the dates of important meets. For these reasons perhaps some of the boys whose records do not show up so well are really better than some who show up better on paper. The following records should, therefore, not be taken too seriously, but the boys who made them are good performers just the same.

## National Interscholastic Records

The National Federation of State High School Athletic Associations has appointed a committee on interscholastic records. This committee will receive claims for all interscholastic records in track and field events. For the present the committee recognizes the records herewith, but reserves the right to make any necessary changes. Claims for records should be sent to the committee secretary, C. W. Whitten, Manager Illinois High School Athletic Association, 11 South LaSalle Street, Chicago, Ill., who will upon request furnish official blanks for the presentation of the claims.

MEET the *Spalding-Mikkola Finnish Javelin*, designed and produced under the supervision of Jaakko Mikkola, coach of the Finnish Olympic Teams.

*Designed and made so it can be thrown on a flatter trajectory and still maintain altitude, so that a longer throw results. But that's not all!*

*It's tougher! . . . Made in Finland of selected straight-grain birch carefully seasoned . . . hand-turned . . . thoroughly inspected to eliminate knots and other weak spots . . . tested to insure the stiffness necessary to minimize vibration.*

*It's truer!* The exactness and care used in the manufacture of the Spalding Mikkola insures a balance point that is exceptionally accurate.

*Its point is sharper and longer—made of two pieces. The upper part is of drawn steel tubing . . . the lower of tough, hard steel, plated to resist rust, and soldered to the tube.*

*How much difference do these improved features make? Ask any coach who's had experience with this javelin. Last year it was thrown by many famous American coaches.*
